Natalia Dronova

About

I'm a Master in Business student in UQ, majoring in Information Systems. I also tutor Information Systems courses and facilitate Design Sprint workshops and other activities for groups of up to 20 students.

About a year ago I attended my first Hackathon and saw all amazing things one can do with a few lines of code. I realized that I want to be the person that builds tools, not just uses them. Currently I'm exploring web development by myself and am looking for ways to make coding a full time experience!
